### STIM300 Inertia Measurement Unit

#### **1 FEATURES**

0

- Miniature package
- o Low noise
- Low bias instability
- o Excellent performance in vibration and shock environments
- o 6 axes offered in same package
  - Electronically calibrated axis alignment
  - Gyros based on Sensonor ButterflyGyro<sup>™</sup>
    - o Single-crystal silicon technology
      - No intrinsic wear-out effects
- o High stability accelerometers and inclinometers
- Separate "AUX" input for 24 bit ADC
- o Insensitive to magnetic fields
- Full EMI compliance
- Digital interface, RS422
- Fully configurable

0

- Continuous self-diagnostics
- o RoHS compatible

#### 2 GENERAL DESCRIPTION

STIM300 is an IMU consisting of 3 high accuracy MEMS-based gyros, 3 high stability accelerometers and 3 high stability inclinometers in a miniature package. Each axis is factory-calibrated for bias, sensitivity and compensated for temperature effects to provide high-accuracy measurements in the temperature range -40°C to +85°C. The unit runs off a single +5V supply.

STIM300 communicates via a standard high-level RS422 interface. The use of a 32-bit RISC ARM microcontroller provides flexibility in the configuration, like choice of output unit, sample rate, low pass filter –3dB frequency and RS422 bit-rate and protocol parameters. All configurable parameters can be defined when ordering or set by customer.

When STIM300 is powered up, it will perform an internal system check and synchronise the sensor channels. As an acknowledgement of the complete power-up sequence, it will provide special datagrams containing part number, serial number and configuration data. STIM300 will then automatically proceed to provide measurement data. Connect power and STIM200 will provide accurate measurement over the second seco

(38.6mm x 44.8mm x 21.5mm)

#### Figure 2-1: STIM300 FUNCTION BLOCK DIAGRAM

and STIM300 will provide accurate measurements over the RS422 interface.

The measurement data is transmitted as packages of data on a fixed format (datagram) at intervals given by the sample rate together with a synchronization signal (TOV). The datagram is in binary coded format in order to have an efficient transfer of data. In addition to the measurement data itself, the datagram contains an identifier, status bytes and a 32 bit CRC (Cyclic Redundancy Check) to provide high degree of fault detection in the transmissions. The status bytes will flag any detected errors in the system. STIM300 can also be configured to transmit data only when triggered by a separate digital input signal (ExtTrig).

For more advanced users, the gyro may be put in Service Mode. In this mode all the configuration parameters can be intermediately or permanently changed by overwriting the current settings in the flash memory. In Service Mode the commands and responses are in a human readable format (ASCII); to enable the use of terminal-type software during typical product integration. Service Mode also provides the ability to perform single measurements, perform diagnostics and obtain a higher detail level of detected errors reported in the status bytes.

DATASHEET

#### 4 DEFINITIONS AND ABBREVIATIONS USED IN DOCUMENT

#### 4.1 Definitions

 $g_0 = 9.80665 \text{m/s}^2$  (standard gravity)

#### 4.2 Abbreviations

#### Table 4-1: Abbreviations

| ABBREVIATION | FULL NAME                       |
|--------------|---------------------------------|
| BCD          | Binary Coded Decimal            |
| BSL          | Best Straight Line              |
| CIC-filter   | Cascaded Integrator-Comb filter |
| CR           | Carriage Return                 |
| FS           | Full-Scale                      |
| LF           | Line Feed                       |
| LP filter    | Low-Pass filter                 |
| tbd          | to be defined                   |
| LSB          | Least Significant Byte          |
| MSB          | Most Significant Byte           |
| lsb          | Least significant bit           |
| TOV          | Time of Validity                |

#### 5 ABSOLUTE MAXIMUM RATINGS

Stresses beyond those listed in Table 5-1 may cause permanent damage to the device.

Exposure to any Absolute Maximum Rating condition for extended periods may affect device reliability and lifetime.

| Table 5-1: Absolute maxi | imum ratings |
|--------------------------|--------------|
|--------------------------|--------------|

| Parameter            | Rating                 | Comment   |
|----------------------|------------------------|---|
| Mechanical shock     | 1 500g/0.5ms half-sine | Any direction. Ref: MIL STD-883G                  |
| ESD human body model | ±2kV                   | Ref: JEDEC/ESDA JS-001                            |
| Storage temperature  | -55°C to +90°C         | Up to 1000 hours                                  |
| VSUP to GND          | -0.5 to +7V            |   |
| RxD+ or RxD- to GND  | -0.3V to +7V           |   |
| RxD+ to RxD-         | ±6V                    | with $120\Omega$ Line Termination = ON            |
| TxD+ or TxD- to GND  | -8V to +8V             |   |
| ExtTrig to GND       | -0.3V to +7V           |   |
| TOV to GND           | -0.3V to +7V           |   |
| NRST to GND          | -0.3V to +7V           |   |
| AUX+ to AUX-         | ±6.5V                  |   |
| AUX+ or AUX- to GND  | ±6.5V                  |   |
| Chassis to GND       | 500V                   |   |
| Helium sensitivity   |                        | Not to be exposed to helium concentrations higher |
|                      |                        | than those normally found in the atmosphere       |

#### **6** SPECIFICATIONS

#### **Table 6-1: Operating conditions**

| Parameter                 | Conditions | Min | Nom  | Max | Unit | Note |
|---------------------------|------------|-----|------|-----|------|------|
| INPUT RANGE, ANGULAR RATE |            |     | ±400 |     | °/s  |      |
| INPUT RANGE, ACCELERATION |            |     | ±10  |     | g    | 1    |
| INPUT RANGE, INCLINATION  |            |     | ±1.7 |     | g    |      |
| POWER SUPPLY              |            | 4.5 | 5.0  | 5.5 | V    | 2,3  |
| OPERATING TEMPERATURE     |            | -40 |      | +85 | °C   |      |

Note 1: Other ranges available, ref. note 1 in Table 6-4

Note 2: At supply voltages above 5.85V (nominal value) an internal voltage protection circuit will cut power and the unit will go into reset until the voltage is back within operating conditions.

Note 3: At supply voltages below 4.05V (nominal value) the unit will go into reset until the voltage is back within operating conditions. Due to power consumption being much lower in reset compared to normal operation, the series resistance between power source and STIM300 could give rise to an oscillating behaviour of the input voltage to the unit.

### STIM300 Inertia Measurement Unit

| <b>TIME OF VALIDITY (TOV PIN)</b><br>Output configuration<br>Internal Pull-Up Resistor to Vsup |      |     | Open drain<br>10 | 50 | kΩ |    |
|--|------|-----|------------------|----|----|----|
| Sink capability<br>TOV active level  |      |     | Active "low"     | 50 | mA |    |
| Minimum time of TOV, t <sub>tov min</sub>  |      | 50  |                  |    | μs | 12 |
| Delay from internal time-tick to   |      |     | 1.2              | 6  | μs | 12 |
| TOV active, t <sub>tov_dl</sub><br>Delay from TOV active (to start of                          |      |     |                  | -  | F  |    |
| transmission, $t_{tx \ dl}$  |      |     |                  | 80 | μs | 12 |
| CHASSIS  |      |     |                  |    |    |    |
| Isolation resistance chassis to  | 500V | 100 |                  |    | MΩ |    |
| GND (pin 15)   |      |     |                  |    |    |    |

Note 1: Time from Power-On to start of datagram transmissions (starting with part-number datagram)

Note 2: Time from Reset release to start of datagram transmissions (starting with part-number datagram)

Note 3: Time from Power-On or Reset to the reset of the Start-Up bit (Bit 6 in the STATUS byte ref. Table 6-21). During this period the output data should be regarded as non-valid.

Note 4: If a user-defined bit-rate larger than 1.5Mbit/s is used, the deviation may exceed the specification due to the resolution of the bit-rate generator, ref. section 10.5.1

Note 5: Other values can be configured, ref. Table 6-11

Note 6: If time between triggers is longer than 127ms, the sample counter will over-run

Note 7: Time between triggers should be carefully evaluated as long time between triggers in combination with high bandwidths could lead to issues related to folding

Note 8: If time between triggers is longer than 8ms, an overload may occur in the incremental angle. An overload will be flagged in the status byte, ref. Table 6-21

Note 9: If time between triggers is longer, the accuracy of average rate may also be reduced. Similar for accelerometer and inclinometer outputs

Note 10: If time between triggers is longer, the integrated angle may have wrapped several times and hence the change in angle from last sample will not be possible to calculate. Similar for accelerometer and inclinometer outputs

Note 11: For definition, ref. Figure 8-3

Note 12: For definition, ref. Figure 8-4 and Figure 8-5

#### Table 6-3: Functional specifications, gyros

### STIM300 Inertia Measurement Unit

| Vibration Rectification Coefficient | Ref. Figure 6-1 | °/h /g² <sub>rms</sub> |    |
|-------------------------------------|-----------------|------------------------|----|
| Misalignment                        | 1               | mrad                   | 9  |
| Orthogonality                       | 0.2             | mrad                   | 10 |

Note 1: Output is monotonous and will saturate at ±480°/s

Note 2: Largest deviation from BSL (Best Straight Line) over the range specified

Note 3: Low-pass filter -3dB frequency can be configured, ref. Table 6-11 and section 6.1.1.4

Note 4: Other values can be configured, ref. Table 6-11. Sample rate will be same for gyros, accelerometers, inclinometers, AUX and temperature

Note 5: Total delay to start of datagram transmission = group delay +  $0.5ms + t_{tov_{dl}} + t_{tx_{dl}}$ . For output units with delayed output, the group delay will be 5ms longer, ref. section 8.5.2.2.1.

Note 6: rms-value calculated on the residuals at static temperatures over the temperature range

Note 7: rms-value calculated on the residual over two temperature-cycles, ref. Figure 6-7

Note 8: Section 7.2 gives advice on sensitive directions

Note 9: Ref. Figure 6-2 for definition of reference points used in axes alignment

Note 10: Gyros, accelerometers and inclinometers are calibrated in the same test-insertion to ensure minimum misalignment between the three sensor-axis systems

Figure 6-1: Nominal VRC at 5g rms for gyros

Figure 6-2: Reference points for alignment of axes

|                       |                              |   |

Refer to section 12 for information on how to configure STIM300 when ordering and to section 10 for information on how to reconfigure the unit in Service Mode.

Some datagrams are longer than the time between each sample at the lower bit-rate. Table 6-12 show the maximum bit-rates.

### STIM300 Inertia Measurement Unit

#### Table 6-12: Maximum sample rate

| Datagram content                                     | Number of<br>transmitted<br>bytes <sup>Note 1</sup> | 374400<br>bits/s <sup>Note 2</sup> | 460800<br>bits/s <sup>Note 2</sup> | 921600<br>bits/s <sup>Note 2</sup> | 1843200<br>bits/s <sup>Note 2</sup> |
|--|---|------------------------------------|------------------------------------|------------------------------------|-------------------------------------|
| Rate   | 18  | 1000                               | 2000                               | 2000                               | 2000                                |

DATASHEET

ButterflyGyro

Normal Mode datagrams with reduced content can be chosen at order or configured in Service Mode. Overview of available datagrams can be found in Table 6-19 and in section 12. When choosing a Normal mode datagram with reduced content, the Normal Mode datagram will be shorter. However the order of requested data will be transmitted as shown in Table 6-18. When selecting temperature in the datagram, only temperatures for the selected measurement-clusters will be transmitted, e.g. if gyro and inclinometer data have been chosen together with temperature, only temperatures for the gyros and inclinometers will be transmitted.

#### Table 6-19: Normal Mode datagram identifiers

| Datagram content                                     | Identifier |
|--|------------|
| Rate   | 0x90       |
| Rate and acceleration                                | 0x91       |
| Rate and inclination                                 | 0x92       |
| Rate, acceleration and inclination                   | 0x93       |
| Rate and temperature                                 | 0x94       |
| Rate, acceleration and temperature                   | 0xA5       |
| Rate, inclination and temperature                    | 0xA6       |
| Rate, acceleration, inclination and temperature      | 0xA7       |
| Rate and AUX   | 0x98       |
| Rate, acceleration and AUX                           | 0x99       |
| Rate, inclination and AUX                            | 0x9A       |
| Rate, acceleration, inclination and AUX              | 0x9B       |
| Rate, temperature and AUX                            | 0x9C       |
| Rate, acceleration, temperature and AUX              | 0xAD       |
| Rate, inclination, temperature and AUX               | 0xAE       |
| Rate, acceleration, inclination, temperature and AUX | 0xAF       |

#### 6.3.6 Cyclic Redundancy Check (CRC)

At the end of all datagrams is a 32-bit Cyclic Redundancy Checksum. The CRC checksum enables the user to detect errors in the transfer of data from STIM300. The CRC is calculated using the following equation:

 $x^{32} + x^{26} + x^{23} + x^{22} + x^{16} + x^{12} + x^{11} + x^{10} + x^8 + x^7 + x^5 + x^4 + x^2 + x + 1$ seed = 0xFFFFFFF

All preceding data, including the datagram identifier, is included in the CRC.

The CRC-algorithm requires full sets of 32-bits (4 bytes). Several of the defined datagrams from STIM300 have a length which is not an integer number of 4 bytes. In order to have an efficient transmission of data and thereby avoid transmitting bytes with no meaningful content, dummy-byte(s) with content = 0x00 are added when the CRC of the last byte(s) is calculated.

Example: Datagram with ID=0xA7 (rate, acceleration, inclination and temperature) has been chosen. This datagram consists of 55 bytes prior to the CRC checksum. Hence this datagram consists of 13 sets of 32 bits + 3 bytes. In order to include the last 3 bytes in the CRC checksum, 1 byte = 0x00 is added, making the last data byte the least significant byte.

Table 6-20 lists the number of dummy-bytes needed to calculate the final CRC-checksum for the different datagrams in Normal Mode.

### STIM300 Inertia Measurement Unit

| Table 6-20: Number of dummy-bytes to be added for CRC-calculation |            |               |  |  |  |  |
|---|------------|---------------|--|--|--|--|
| Datagram content  | Identifier | # dummy-bytes |  |  |  |  |
| Part Number datagram  | 0xB1, 0xB3 | 0             |  |  |  |  |
| Serial Number datagram  | 0xB5, 0xB7 | 0             |  |  |  |  |
| Configuration datagram  | 0xB9, 0xBB | 2             |  |  |  |  |
| Extended Error Information datagram                               | 0xBE, 0xBF | 3             |  |  |  |  |
| Rate  | 0x90       | 2             |  |  |  |  |
| Rate and acceleration   | 0x91       | 0             |  |  |  |  |
| Rate and inclincation   | 0x92       | 0             |  |  |  |  |
| Rate, acceleration and inclination                                | 0x93       | 2             |  |  |  |  |
| Rate and temperature  | 0x94       | 3             |  |  |  |  |
| Rate, acceleration and temperature                                | 0xA5       | 2             |  |  |  |  |
| Rate, inclination and temperature                                 | 0xA6       | 2             |  |  |  |  |
| Rate, acceleration, inclination and temperature                   | 0xA7       | 1             |  |  |  |  |
| Rate and AUX  | 0x98       | 2             |  |  |  |  |
| Rate, acceleration and AUX  | 0x99       | 0             |  |  |  |  |
| Rate, inclincation and AUX  | 0x9A       | 0             |  |  |  |  |
| Rate, acceleration, inclination and AUX                           | 0x9B       | 2             |  |  |  |  |
| Rate, temperature and AUX   | 0x9C       | 3             |  |  |  |  |
| Rate, acceleration, temperature and AUX                           | 0xAD       | 2             |  |  |  |  |
| Rate, inclination, temperature and AUX                            | 0xAE       | 2             |  |  |  |  |
| Rate, acceleration, inclination, temperature and AUX              | 0xAF       | 1             |  |  |  |  |

#### 6.4 Status byte

#### Table 6-21: Interpretation of bits in STATUS byte

| Bit | STATUS bit information               | Comment                                    |
|-----|--------------------------------------|--|
| 7   | 0=OK, 1=System integrity error       |  |
| 6   | 0=OK, 1=Start-Up                     |  |
| 5   | 0=OK, 1=Outside operating conditions |  |
| 4   | 0=OK, 1=Overload                     | Bits 0-2 will flag the overload channel(s) |
| 3   | 0=OK, 1=Error in measurement-        | Bits 0-2 will flag the error channel(s)    |
|     | channel                              |  |
| 2   | 0=OK, 1=Z-channel                    |  |
| 1   | 0=OK, 1=Y-channel                    |  |
| 0   | 0=OK, 1=X-channel (or AUX)           |  |

Refer to section 8.6 for more information related to the self-diagnostics of STIM300.

### STIM300 Inertia Measurement Unit

#### 7.2 Advice on mounting orientation

The gyros are sensitive to acceleration-forces in certain directions:

- X- and Y-gyros have their highest sensitivity to acceleration-forces in Z-direction
- Z-gyro has its highest sensitivity to acceleration-forces in Y-direction
- X-gyro has its lowest sensitivity to acceleration-forces in X-direction
- Y-gyro has its lowest sensitivity to acceleration-forces in Y-direction
- Z-gyro has its lowest sensitivity to acceleration-forces in Z-direction

#### 7.3 Pin configuration

#### Figure 7-3: Pin configuration as seen from front of STIM300 Table 7-3: Pin descriptions

| Table 7-3: Pin descriptions |         |        |   |  |  |  |  |

#### 7.4 Definition of axes

#### Figure 7-4: Definition of axes

DATASHEET

ButterflyGyro

#### 8 BASIC OPERATION

STIM300 is very simple to use. Unless having been configured with external trigger, the unit will start performing measurements and transmit the results over the RS422 interface without any need for additional signalling or set-up after power-on. Figure 8-1 shows the simplest connection set-up for STIM300.

#### Figure 8-1: Transmit-Only Electrical Connection Diagram

In order to take full advantage of all features of STIM300, the unit needs to be connected as shown in Figure 8-2. In this set-up the system can reset the unit without having to toggle power, the external trigger function can be utilized, configuration parameters can be changed and extended information like diagnostic information can be read from the device.

#### Figure 8-2: Full Function Electrical Connection Diagram

#### 8.1 Reset

STIM300 has a separate reset pin (NRST) in order for the application to reset the unit without having to toggle power.

The reset is active low and has an internal pull-up. Hence the input could be left floating if not in use.

The reset signal is routed to the reset of the microcontroller and effectively forces STIM300 into Init Mode (ref. Figure 8-6 and section 8.5.1).

#### 8.2 External Trigger

STIM300 has a separate digital input pin to be used when the unit has been configured to transmit only upon external trigger. The measurements themselves will be continuously running at the highest sample rate (2000 samples/s) in order to ensure shortest possible latency when a transmission is requested. The input is set to trigger on the falling edge of the input signal and will then transmit one datagram containing the result of the latest measurement.

The input has an internal pull-up. Hence the input could be left floating if not in use.

Note that the commands in Normal Mode are active even if the datagram transmission has been configured to transmit only upon external trigger. This means that e.g. if the Normal Mode command "C" is issued over the RS-422 interface,

DATASHEET

ButterflyGyro

ΤМ

### STIM300 Inertia Measurement Unit

the STIM300 will transmit a Configuration Datagram independent on the external trigger input. Also when STIM300 is in Init Mode (after Power on or Reset), it will transmit the 3 datagrams as described in section 8.5.1.

The timing diagram is shown in Figure 8-3. Latency is the time between the moment at which the sample has been digitized + low pass-filtered and the receipt of the external trigger.

Figure 8-3: Timing of external trigger

#### 8.3 Time of Validity (TOV)

The TOV-output serves 2 purposes:

- Provide a synchronisation-signal derived from the internal clock of STIM300
- Provide means to signal when a datagram is being transmitted (NB: not when configured to external trigger)

The TOV falling edge occurs synchronous to the sample rate. The raising edge occurs after the last bit of the datagram has been transmitted.

Figure 8-4 and Figure 8-5 show the timing diagram of the TOV-output.

Figure 8-4: Timing of TOV (example: sample rate = 1000samples/s)

# STIM300 Inertia Measurement Unit

Figure 8-5: Timing of TOV with external trigger

## 8.4 Auxiliary input

STIM300 provides input in order to digitize an external signal. The digitizer is a 24 bit sigma-delta ADC. The AUX data (24 bits + status byte) can be included in the datagrams, ref. sections 12 and 10.4. A simple compensation of the AUX data is performed as shown in Equation 1. The AUX data will be low-pass filtered. The bandwidth can be changed in Service Mode, ref. section 10.8.

# Equation 1: AUX compensation algorithm:

 $AUX \_Output = A * AUX \_Input + B$ 

where A and B are coefficients that can be programmed by the user in SERVICEMODE (k (AUX COMP)-command)

# 8.5 Operating modes

The operating modes of STIM300 are shown in Figure 8-6:

### Figure 8-6: Operating modes

ButterflyGyro

# STIM300 Inertia Measurement Unit

## 8.5.1 Init Mode

Init Mode is entered after the following conditions:

- power on
- after an external reset
- when receiving a reset-command in Normal Mode
- when exiting to Init Mode from Service Mode.

In Init Mode the system waits for internal references to settle, resets and synchronizes the sensor channels and transmits three special datagrams containing part number, serial number and configuration data. Note that length and format of the special datagrams are different to the datagrams in Normal Mode.

The content and format of the Part Number datagram is specified in Table 6-13.

The content and format of the Serial Number datagram is specified in Table 6-14.

The content and format of the Configuration datagram is specified in Table 6-15.

After having transmitted the special Part Number, Serial Number and Configuration datagrams, STIM300 enters Normal Mode.

All these special datagrams can also be requested by commands in Normal Mode, ref. Section: 9.

## 8.5.2 Normal Mode

In Normal Mode STIM300 will constantly transmit sensor-data at the configured sample rate. The internal sample rate will always be at the maximum regardless of the transmitted sample rate.

STIM300 will continue to transmit data regardless of any errors reported in the STATUS-bytes (ref. Table 6-21). Hence the content of the STATUS-byte should continuously be examined.

The content of the Normal Mode datagram is specified in Table 6-18.

### 8.5.2.1 Start-Up

When STIM300 enters Normal Mode from Init Mode, there will be a start-up period where STIM300 is stabilizing the gyros. During this period bit 6 is set in the STATUS-byte (ref. Table 6-21) to communicate its condition. Once stabilized, bit 6 will be cleared. During this period the output data should be regarded as non-valid.

There will not be any start-up period when STIM300 is exiting from Service Mode directly to Normal Mode.

## 8.5.2.2 Data output options and interpretation

The gyros in STIM300 measure angular rate [°/s], the accelerometers measure acceleration [g] and the inclinometers measure acceleration [g]. However, in order to make the STIM300 more versatile, a few simple functions are offered, ref. Table 8-1 and Table 8-2:

| Description of function  | Equation   | Output unit   |
|--|--|---|
| Adds all internal samples between<br>two transmissions multiplied by the<br>time between internal samples  | $Incremental = \sum_{i=1}^{n} AngularRate_{i} \cdot \frac{1}{2000}s$   | [°]   |
|  | n = 2000 / sample rate   |   |
| Calculates the average of the internal samples between two transmissions   | $Average = \frac{1}{n} \cdot \sum_{i=1}^{n} AngularRate_{i}$   | [°/s]   |
|  | n = 2000 / sample rate   |   |
| Adds all internal samples multiplied<br>by the time between internal<br>samples since start-up / last reset.<br>Note that the result takes values in<br>the interval [-4°, 4°> and will<br>naturally wrap-around with no error-<br>message indication in the Status- | $Integrated = \sum_{i=1}^{n} AngularRate_{i} \cdot \frac{1}{2000}s$<br>n = internal samples (at a rate of 2000 samples/s)<br>since start-up or last reset)   | [°]   |
|  | Adds all internal samples between<br>two transmissions multiplied by the<br>time between internal samples<br>Calculates the average of the<br>internal samples between two<br>transmissions<br>Adds all internal samples multiplied<br>by the time between internal<br>samples since start-up / last reset.<br>Note that the result takes values in<br>the interval [-4°, 4°> and will<br>naturally wrap-around with no error- | Adds all internal samples between<br>two transmissions multiplied by the<br>time between internal samplesIncremental = $\sum_{i=1}^{n} AngularRate_i \cdot \frac{1}{2000}s$ Calculates the average of the<br>internal samples between two<br>transmissions $n = 2000 / \text{ sample rate}$ Calculates the average of the<br>internal samples between two<br>transmissions $n = 2000 / \text{ sample rate}$ Adds all internal samples multiplied<br>by the time between internal<br>samples since start-up / last reset.<br>Note that the result takes values in<br>the interval [-4°, 4°> and will<br>naturally wrap-around with no error-<br>message indication in the Status-Integrated = $\sum_{i=1}^{n} AngularRate_i \cdot \frac{1}{2000}s$ n = internal samples (at a rate of 2000 samples/s)<br>since start-up or last reset)n = internal samples (at a rate of 2000 samples/s) |

### Table 8-2: Implemented functions for accelerometer/inclinometer output units

| Function    | Description of function   | Equation   | Output unit |
|-------------|---|--|-------------|
| Incremental | Adds all internal samples between<br>two transmissions multiplied by the<br>time between internal samples and<br>converted to [m/s] | Incremental = $k_0 \cdot \sum_{i=1}^{n} Acceleration_i \cdot \frac{1}{2000}s$<br>$k_0 = 9.80665 \text{ m/s}^2/\text{g}$<br>n = 2000 /  sample rate | [m/s]       |
| Average     | Calculates the average of the internal samples between two transmissions  | $Average = \frac{1}{n} \cdot \sum_{i=1}^{n} Acceleration_{i}$<br>n = 2000 / sample rate  | [g]         |

### 8.5.2.2.1 Delayed gyro output

The inherent group delay of the gyro-, accelerometer- , inclinometer- and AUX-signals are different, ref. Table 6-3, Table 6-4,

Table 6-8 and Table 6-9 respectively.

An option is available to delay the gyro signals by 5ms in order for the group delay of gyros, accelerometers and AUX to be similar. To enable this feature, select the gyro output-unit  $\geq$  8, ref. section 10.7 and 12.

DATASHEET

# STIM300 Inertia Measurement Unit

## 8.5.2.2.2 Gyro output unit = Angular Rate

In the case of STIM300 being configured to output angular rate, Equation 2 and Figure 8-7 show how to convert to [°/s]. Note that the output data is represented as two's complement.

## Equation 2: Converting output to [°/s]:

 $Output[^{\circ}/s] = \frac{(AR_1) \cdot 2^{16} + (AR_2) \cdot 2^8 + (AR_3)}{2^{14}}$ 

where  $AR_1$  is the most significant byte of the 24bit output

AR<sub>2</sub> is the middle byte of the 24bit output

AR<sub>3</sub> is the least significant byte of the 24bit output

|                |                |                | – AR           | 1 —            |                |                |                | -              |                |                 | – AR            | 2               |                 |                 |                 | •               |                 |                 | - AR <sub>3</sub> |                  |                  |                  |                  |
|----------------|----------------|----------------|----------------|----------------|----------------|----------------|----------------|----------------|----------------|-----------------|-----------------|-----------------|-----------------|-----------------|-----------------|-----------------|-----------------|-----------------|-------------------|------------------|------------------|------------------|------------------|
| Bit 23         | Bit 22         | Bit 21         | Bit 20         | Bit 19         | Bit 18         | Bit 17         | Bit 16         | Bit 15         | Bit 14         | Bit 13          | Bit 12          | Bit 11          | Bit 10          | Bit 9           | Bit 8           | Bit 7           | Bit 6           | Bit 5           | Bit 4             | Bit 3            | Bit 2            | Bit 1            | Bit 0            |
| 2 <sup>9</sup> | 2 <sup>8</sup> | 2 <sup>7</sup> | 2 <sup>6</sup> | 2 <sup>5</sup> | 2 <sup>4</sup> | 2 <sup>3</sup> | 2 <sup>2</sup> | 2 <sup>1</sup> | 2 <sup>0</sup> | 2 <sup>-1</sup> | 2 <sup>-2</sup> | 2 <sup>-3</sup> | 2 <sup>-4</sup> | 2 <sup>-5</sup> | 2 <sup>-6</sup> | 2 <sup>-7</sup> | 2 <sup>-8</sup> | 2 <sup>-9</sup> | 2 <sup>-10</sup>  | 2 <sup>-11</sup> | 2 <sup>-12</sup> | 2 <sup>-13</sup> | 2 <sup>-14</sup> |

### 8.5.2.2.3 Gyro output unit = Incremental Angle

In the case of STIM300 being configured to output incremental angle per sample, the equations for conversion to [°/sample] can be found in Equation 3 and Figure 8-8. Note that the output data is represented as two's complement.

### Equation 3: Converting output to [°/sample]

$$Output[^{\circ} / sample] = \frac{(IA_1) \cdot 2^{16} + (IA_2) \cdot 2^8 + (IA_3)}{2^{21}}$$

where  $IA_1$  is the most significant byte of the 24bit output

IA<sub>2</sub> is the middle byte of the 24bit output

 $\mathsf{IA}_3$  is the least significant byte of the 24bit output

| -              |                |                | – IA <sub>1</sub> |                 |                 |        |                 | •               |                 |                 | – IA <sub>2</sub> |                  |                  |                  |                  | •                |                  |                  | - IA <sub>3</sub> |                  |                  |                  | -                |
|----------------|----------------|----------------|-------------------|-----------------|-----------------|--------|-----------------|-----------------|-----------------|-----------------|-------------------|------------------|------------------|------------------|------------------|------------------|------------------|------------------|-------------------|------------------|------------------|------------------|------------------|
| Bit 23         | Bit 22         | Bit 21         | Bit 20            | Bit 19          | Bit 18          | Bit 17 | Bit 16          | Bit 15          | Bit 14          | Bit 13          | Bit 12            | Bit 11           | Bit 10           | Bit 9            | Bit 8            | Bit 7            | Bit 6            | Bit 5            | Bit 4             | Bit 3            | Bit 2            | Bit 1            | Bit 0            |

### Figure 8-8: Converting output bytes to [°/sample]

### 8.5.2.2.4 Gyro output unit = Average Angular Rate

In the case of STIM300 being configured to output average angular rate, the transmitted data will be the average of the samples since last transmission. E.g. in the case of continuous transmission of datagrams and a sample rate of 500Hz, each transmission will contain the average of the four previous internal samples.

Note that the configured low-pass filtering is performed prior to calculating the average.

Conversion to [°/s] is the same as for angular rate and is described in Equation 2.

### 8.5.2.2.5 Gyro output unit = Integrated Angle

In the case of STIM300 being configured to output integrated angle, the transmitted data will be the continuously integrated angle since power-on or reset. The integrated angle takes values in the interval [-4°, 4°> and will naturally wrap-around with no error-message indication in the Status-byte.

Conversion to [°] is the same as for incremental angle and is described in Equation 3.

DATASHEET

ButterflyGyro

ТΜ

# STIM300 Inertia Measurement Unit

### 8.5.2.2.6 Gyro g-compensation

As the STIM300 also contains accelerometers and inclinometers, functionality has been implemented to provide means to compensate for the g-sensitivity for gyro scale-factor and/or bias.

In addition, a simple 1-pole low-pass filter can be switched in to apply additional filtering of the accelerometer-/inclinometer-signal prior to use in the compensation, ref: Figure 8-10. A simplified compensation-scheme can be found in Figure 8-9.

Figure 8-9: Simplified compensation-scheme for gyro g-compensation

Figure 8-10: Frequency characteristics of g-compensation low-pass filter for 0.001Hz, 0.01Hz and 5Hz settings

### 8.5.2.2.7 Accelerometer output unit = Acceleration

In the case of STIM300 being configured to output acceleration, Equation 4 and Figure 8-11 show how to do this. Note that the output data is represented as two's complement.

| Range | Conversion:   |
|-------|---|
| 2g    | $Output[g] = \frac{(ACC_1) \cdot 2^{16} + (ACC_2) \cdot 2^8 + (ACC_3)}{2^{21}}$ |
| 5g    | $Output[g] = \frac{(ACC_1) \cdot 2^{16} + (ACC_2) \cdot 2^8 + (ACC_3)}{2^{20}}$ |
| 10g   | $Output[g] = \frac{(ACC_1) \cdot 2^{16} + (ACC_2) \cdot 2^8 + (ACC_3)}{2^{19}}$ |
| 30g   | $Output[g] = \frac{(ACC_1) \cdot 2^{16} + (ACC_2) \cdot 2^8 + (ACC_3)}{2^{18}}$ |
| 80g   | $Output[g] = \frac{(ACC_1) \cdot 2^{16} + (ACC_2) \cdot 2^8 + (ACC_3)}{2^{16}}$ |

where  $ACC_1$  is the most significant byte of the 24bit output  $ACC_2$  is the middle byte of the 24bit output

ACC3 is the least significant byte of the 24bit output

### 8.5.2.2.8 Accelerometer output unit = Incremental Velocity

In the case of STIM300 being configured to output incremental velocity per sample, the equations for conversion to [m/s/sample] can be found in Equation 5 and Figure 8-12. Note that the output data is represented as two's complement.

| Range | Conversion:   |
|-------|---|
| 2g    | $Output[m / s / sample] = \frac{(IV_1) \cdot 2^{16} + (IV_2) \cdot 2^8 + (IV_3)}{2^{24}}$ |
| 5g    | $Output[m / s / sample] = \frac{(IV_1) \cdot 2^{16} + (IV_2) \cdot 2^8 + (IV_3)}{2^{23}}$ |
| 10g   | $Output[m/s/sample] = \frac{(IV_1) \cdot 2^{16} + (IV_2) \cdot 2^8 + (IV_3)}{2^{22}}$     |
| 30g   | $Output[m / s / sample] = \frac{(IV_1) \cdot 2^{16} + (IV_2) \cdot 2^8 + (IV_3)}{2^{21}}$ |
| 80g   | $Output[m / s / sample] = \frac{(IV_1) \cdot 2^{16} + (IV_2) \cdot 2^8 + (IV_3)}{2^{19}}$ |

## Equation 5: Converting output to [m/s/sample]

DATASHEET

ButterflyGyro

### 8.5.2.2.9 Accelerometer output unit = Average Acceleration

In the case of STIM300 being configured to output average acceleration, the transmitted data will be the average of the samples since last transmission. E.g. in the case of continuous transmission of datagrams and a sample rate of 500Hz, each transmission will contain the average of the four internal samples.

Conversion to [g] is the same as for angular rate and is described in Equation 4.

### 8.5.2.2.10 Inclinometer output unit = Acceleration

In the case of STIM300 being configured to output acceleration, Equation 6 and Figure 8-13 show how to do this. Note that the output data is represented as two's complement.

### Equation 6: Converting output to [g]:

 $Output[g] = \frac{(ACC_1) \cdot 2^{16} + (ACC_2) \cdot 2^8 + (ACC_3)}{2^{22}}$ 

where  $ACC_1$  is the most significant byte of the 24bit output

ACC<sub>2</sub> is the middle byte of the 24bit output

ACC3 is the least significant byte of the 24bit output

| -  |                |                |        | – ACC  | 1               |                 |                 |                 | •      |                 |                 | - ACC            | 2                |                  |                  |                  | •                |                  |                  | ACC              | 3                |       |                  | ►     |

# STIM300 Inertia Measurement Unit

## 8.5.2.2.13 Temperature

Temperature data for each axis is available in certain datagrams (ref. section 12).

Equation 8 and Figure 8-15 show how to convert to [°C]. Note that the output data is represented as two's complement.

### Equation 8: Converting temperature data to [°C]

 $Output [^{\circ}C] = \frac{(T_1) \cdot 2^8 + (T_2)}{2^8}$ 

where  $T_1$  is the most significant byte of the 16bit output

 $T_2$  is the least significant byte of the 16bit output

| •      |                |                | – T <sub>1</sub> |                |                |                |                | •     |       |                 | - T <sub>2</sub> |                 |                 |                 |                 |

## Figure 8-16: Converting output bytes to [V]

### 8.5.2.2.15 Counter

Counter is continuously counting the internal samples (2000 samples/s). Counter is an un-signed single byte taking values in the interval [0, 255]. The counter will naturally wrap-around with no error-message indication in the Statusbyte.

### 8.5.2.2.16 Latency

To calculate the latency in [µs], refer to Equation 10 and Figure 8-17. Note that latency is an unsigned word.

## Equation 10: Converting output to [µs]:

 $Output[\mu s] = (LT_1) \cdot 2^8 + (LT_2)$ 

where  $LT_1$  is the most significant byte of the 16bit output

LT<sub>2</sub> is the least significant byte of the 16bit output

### Figure 8-17: Converting output bytes to [µs]

# STIM300 Inertia Measurement Unit

## 8.5.3 Service Mode

In Service Mode the communication interface is human readable and hence the communication format (ASCII) supports the use of terminal-based software during the development phase, when the configuration of a device needs to be changed or during investigations into an observed problem.

When Service Mode is entered, STIM300 will respond with its configuration information (same as the response to the <u>i</u> (INFORMATION) command, ref: Figure 10-1).

A set of commands are available, ref. Section 10, enabling the user to change intermediately or permanently the configuration parameters, display latest measurement results, display higher details on error information and perform a full diagnostic of the unit.

In Service Mode the gyro measurements will still be running in the background, enabling to switch directly back to Normal Mode without the need for any stabilisation time of filters, etc. However the measurement data itself, when STIM300 is in Service Mode are not transmitted and therefore lost. By using the <u>a</u> (SINGLE-SHOT MEASUREMENT) command (ref. Section 10.2) it is possible to display single measurement results.

Exiting Service Mode can be done in several ways:

- 1. Using the external reset. This will force STIM300 into Init Mode. Be advised that during Init Mode, all the configuration parameters are loaded from flash. If any of the configuration parameters have been changed during the Service Mode session but not saved to flash, these changes will be overwritten by the content already stored in flash.
- 2. Using the <u>x</u> (EXIT) command. When using this command a parameter is required to decide whether the device should go to Init Mode or to Normal Mode. When exiting to Normal Mode, any of the changes made to the configuration parameters will still be valid. However, if not saved, the configuration parameters will be overwritten by the content already stored in flash at the next power-up or reset.

### 8.6 Self-diagnostics

STIM300 is continuously checking its internal status. The checks include:

- Check of internal references
- Check of sensors (error and overload)
- Check of internal temperatures
- Check of RAM and flash
- Check of supply voltage

A full diagnostic can be run to see the result of the individual checks by using the <u>c</u> (DIAGNOSTIC) command, ref. Section 10.3 in SERVICEMODE.

When an error situation is detected, the corresponding bit in the STATUS byte (ref. Table 6-21) will be set. If the sample-rate is set lower than 2000 samples/s, the STATUS byte will reflect the accumulated status of all the sub-samples between two data transmissions. The bits in the STATUS bytes are valid for the data in a single transmission and hence not latched.

Access to extended error registers containing accumulated error-information can be achieved either by using the Normal Mode-command "E" (EXTENDED ERROR INFORMATION DATAGRAM, ref. section 9.4 and Table 6-17) or the SERVICEMODE-command <u>i.e</u> (INFORMATION on ACCUMULATED LAST ERRORS, ref. section 10.1).

The extended error registers are cleared at the following events:

- After the start-up phase, triggered by power-on or reset
- After transmission of Extended Error Information Datagram (ref. section 9.4)
- After use of SERVICEMODE-command "i e" (INFORMATION on ACCUMULATED LAST ERRORS, ref. section 10.1)

## 9 COMMANDS IN NORMAL MODE

Several commands are available in Normal Mode, as listed in Table 9-1. Note that all commands in Normal Mode must be transmitted in upper case letters.

### Table 9-1 Available commands in Normal Mode

| Command     | Short description                                 |
|-------------|---|
| N           | Transmits one Part Number datagram                |
| I           | Transmits one Serial Number datagram              |
| С           | Transmits one Configuration datagram              |
| E           | Transmits one Extended Error Information datagram |
| R           | Resets the unit                                   |
| SERVICEMODE | Enters Service Mode                               |

### Table 9-2 List of special ASCII characters used in Normal Mode

| Char      | Hex  | Dec | Short description   |
|-----------|------|-----|---|
| <cr></cr> | 0x0D | 13  | "Carriage Return": used as execution character for commands |

No echo of received command characters or error messages will appear for these commands. Only at the receipt of the complete correct command, will STIM300 execute accordingly.

NB: if OUTPUT-UNIT is set to INCREMENTAL (ref. Section 10.7), the transmitted incremented value in the datagram following any of the requested special datagrams will NOT contain the incremental value since the last transmitted measurement. Hence the incremented value(s) occurring during the transmission of a special requested datagram will be lost.

### 9.1 N (PART NUMBER DATAGRAM) command

General description: Requests transmission of a Part Number datagram (ref. Table 6-13).

### Table 9-3 : Available I (PART NUMBER DATAGRAM) command

| Syntax      | Response                           |
|-------------|------------------------------------|
| N <cr></cr> | Transmits one Part Number datagram |

The Part Number datagram will replace the next transmitted Normal Mode datagram. If the Part Number datagram is longer than the chosen Normal Mode datagram, the Part Number datagram may replace more than one Normal Mode datagram transmission (dependent on sampling-rate and bit-rate).

If sample rate is set to external trigger, the Part Number datagram will be transmitted without waiting for the next trigger signal.

### 9.2 I (SERIAL NUMBER DATAGRAM) command

General description: Requests transmission of a Serial number datagram (ref. Table 6-14).

### Table 9-4 : Available I (SERIAL NUMBER DATAGRAM) command

| Syntax      | Response                             |
|-------------|--------------------------------------|
| I <cr></cr> | Transmits one Serial Number datagram |

The Serial Number datagram will replace the next transmitted Normal Mode datagram. If the Serial Number datagram is longer than the chosen Normal Mode datagram, the Serial Number datagram may replace more than one Normal Mode datagram transmission (dependent on sampling-rate and bit-rate).

If sample rate is set to external trigger, the Serial Number datagram will be transmitted without waiting for the next trigger signal.

# STIM300 Inertia Measurement Unit

### 9.3 C (CONFIGURATION DATAGRAM) command

General description: Requests transmission of a Configuration datagram (ref. Table 6-15).

#### Table 9-5: Available C (CONFIGURATION DATAGRAM) command

| Syntax      | Response                             |
|-------------|--------------------------------------|
| C <cr></cr> | Transmits one Configuration datagram |

The Configuration datagram will replace the next transmitted Normal Mode datagram. If the Configuration datagram is longer than the chosen Normal Mode datagram, the Configuration datagram may replace more than one Normal Mode datagram transmission (dependent on sampling-rate and bit-rate).

If sample rate is set to external trigger, the Configuration datagram will be transmitted without waiting for the next trigger signal.

### 9.4 E (EXTENDED ERROR INFORMATION DATAGRAM) command

General description: Requests transmission of an Extended Error Information datagram (ref. Table 6-16). This datagram contains the accumulated detected errors (ref. section 8.6).

Once the Extended Error Information datagram has been transmitted, the error-registers are cleared.

#### Table 9-6: Available E (EXTENDED ERROR INFORMATION) command

|   | Syntax      |
|---|-------------|
| E <cr> Transmits one Extended Error Information datagram</cr> | E <cr></cr> |

The Extended Error Information datagram will replace the next transmitted Normal Mode datagram. If the Extended Error Information datagram is longer than the chosen Normal Mode datagram, the Extended Error Information datagram may replace more than one Normal Mode datagram transmission (dependent on sampling-rate and bit-rate).

If sample rate is set to external trigger, the Extended Error Information datagram will be transmitted without waiting for the next trigger signal.

### 9.5 R (RESET) command

General description: Force a Reset

### Table 9-7: Available R (RESET) command

| Syntax      | Response        |
|-------------|-----------------|
| R <cr></cr> | Resets the unit |
|             |                 |

### 9.6 SERVICEMODE command

General description : Enters Service Mode (ref. section 8.5.3).

## Table 9-8: Available SERVICEMODE command

| Syntax                | Response            |  |  |  |  |  |
|-----------------------|---------------------|--|--|--|--|--|
| SERVICEMODE <cr></cr> | Enters Service Mode |  |  |  |  |  |
|                       |                     |  |  |  |  |  |

If the command is received during the transmission of a datagram, it will complete the transmission before entering Service Mode.

When entering Service Mode, the configuration and identification data of the device will be listed, as shown in Figure 9-1:

DATASHEET

## 10 COMMANDS IN SERVICE MODE

Several commands are available in Service Mode, as listed in Table 10-1. Note that all commands in Service Mode are case-sensitive (commands are lower case letters, whilst some parameters may be capital case letters).

#### Table 10-1 Available commands in Service Mode

| Command | Short description   |
|---------|---|
| i       | Lists specific information (e.g. serial number, configuration, error information) |
| а       | Performs a single-shot measurement  |
| С       | Performs a diagnostic of the unit   |
| d       | Changes datagram format   |
| t       | Changes transmission parameters (e.g. bit-rate, data-length, stop-bits)           |
| r       | Turns line termination ON or OFF  |
| u       | Changes measurement output unit   |
| f       | Changes LP filter -3dB frequency  |
| m       | Changes sample rate   |
| k       | Changes coefficients of the AUX compensation algorithm                            |
| g       | Changes the gyro g-compensation configuration for bias and scale factor           |
| S       | Saves configuration data  |
| х       | Exits Service Mode and returns to Normal Mode or Init Mode                        |
| Z       | Restore to factory settings   |
| ?       | Help function on the available commands in Service Mode                           |

### Table 10-2 List of special ASCII characters used in Service Mode

| Char      | Hex  | Dec | Short description   |
|-----------|------|-----|---|
| <bs></bs> | 0x08 | 8   | "Back Space": deletes last received character (received since last <cr>)</cr> |
| <cr></cr> | 0x0D | 13  | "Carriage Return": typically used as execution character for commands         |
| <sp></sp> | 0x20 | 32  | "Space": used to separate command and first parameter                         |
| ۰,<br>,   | 0x2C | 44  | "Comma": used to separate parameters in a command                             |
| '>'       | 0x3E | 62  | Used together with <cr> as: "Ready to receive new command"-prompt</cr>        |

When STIM300 is in Service Mode and ready to receive a new command, it will issue the special ASCII character <CR> followed by '>'. As some commands (e.g. SINGLE-SHOT MEASUREMENT-command) may respond with a varying number of lines, automated set-ups should look for the special prompt-sequence (<CR>+'>') before issuing a new command.

Received characters will be echoed. A command is decoded and executed when receiving the special ASCII character <CR>. <BS> ("back-space") is also recognised and will delete the last received character in the input buffer. The size of the input buffer is 80 characters. <BS> is valid for the characters received since last <CR>.

The command-character and first parameter (when applicable) are separated by a space (character 0x20). When there are more than one parameter to a command (e.g. TRANSMISSION PARAMETER-command), these must be separated by a comma (character 0x2C).

In the event of an unknown command, inconsistent syntax or incorrect value of parameter(s), STIM300 will respond with an error message. Error messages are on the format:

E<nnn><SP><Error description><CR>

where nnn is an error number

## 10.1 i (INFORMATION) command

General description: Lists various requested information about the device

### Table 10-3 : Available i (INFORMATION) commands

| Syntax                          | Response  |
|---------------------------------|---|
| i <cr></cr>                     | Lists the product configuration and identification data |
| i <sp><cmd><cr></cr></cmd></sp> | Gives information about the specific parameter          |

### Table 10-4 : Allowed values for <cmd> parameter for i (INFORMATION) commands

| <cmd></cmd> | Result  |  |
|-------------|---|--|
| S           | Returns the serial number of the device   |  |
| n           | n       Returns the product name of the device         x       Returns the part number of the device  |  |
| X           |   |  |
| а           |   |  |
| р           | p Returns the FW configuration and revision of the device   |  |
| m           | Returns the sample rate of the device   |  |
| f           | fReturns the LP filter -3dB frequency for each axisdReturns the datagram format   |  |
| d           |   |  |
| t           | Returns the transmission parameters of the device   |  |
| r           | Returns the line termination (ON or OFF)  |  |
| u           | u       Returns the output units of the device         g       Returns the configuration of the gyro g-compensation         k       Returns the compensation coefficients for AUX input |  |
| g           |   |  |
| k           |   |  |
| е           | Prints the extended error information from the accumulated detected error(s) since last error read-   |  |
|             | out in Service Mode or by the E-command in Normal Mode (ref. section 9.4)   |  |

### Table 10-5: Error messages for i (INFORMATION) commands

| Error | Message             | Possible reason  |
|-------|---------------------|--|
| E001  | UNKOWN COMMAND      | Command or parameter is not recognised                       |
| E002  | INCORRECT NUMBER OF | Too many or too few parameters, use of comma between command |
|       | PARAMETERS          | and first parameter  |
| E003  | INVALID PARAMETER   | Value of parameter outside valid range                       |

### 10.4 d (DATAGRAM FORMAT) command

General description: Sets the datagram transmission mode and termination (ref.Table 6-11 and section 12).

Note that the datagram format could be considered invalid, even if it has been entered correctly. This is because a valid datagram format also depends on the chosen sample rate and bit rate (ref. Table 6-12 and error message E007 in Table 10-13).

Note that this change will only be effective until STIM300 is initialized, reset or powered off, unless the new setting has been stored in flash using the SAVE-command (ref. section 10.11). In order to use or test a new setting in Normal Mode without permanently storing it, this can be achieved by using the EXIT n-command (ref. section 10.13).

# Table 10-10 : Available d (DATAGRAM FORMAT) command

### 10.5 t (TRANSMISSION PARAMETERS) command

General description: Changes the transmission parameters for the RS422 interface.

Note that the bit-rate could be considered invalid, even if it has been entered correctly. This is because a valid bit-rate also depends on the sample rate and chosen datagram content (ref. Table 6-12 and error message E007 in Table 10-18).

Note that this change will only be effective until STIM300 is initialized, reset or powered off, unless the new setting has been stored in flash using the SAVE-command (ref. section 10.11). In order to use or test a new setting in Normal Mode without permanently storing it, this can be achieved by using the EXIT n-command (ref. section 10.13).

### Table 10-14 : Available t (TRANSMISSION PARAMETERS) commands

| Syntax  | Response   |
|---|--|
| t <sp><bit-rate code=""><cr></cr></bit-rate></sp>   | Changes the transmission bit-rate and leaves number of   |
|   | stop-bits and parity unchanged                           |
| t <sp><bit-rate code="">','<stop-bits>','<parity><cr></cr></parity></stop-bits></bit-rate></sp> | Changes the transmission bit-rate, number of stop-bits   |
|   | and parity   |
| t <sp>'f,'<bit-rate><cr></cr></bit-rate></sp>   | Changes the transmission bit-rate to a user-defined bit- |
|   | rate and leaves number of stop-bits and parity           |
|   | unchanged, ref.section 10.5.1                            |
| t <sp>'f,'<bit-rate>','<stop-bits>','<parity><cr></cr></parity></stop-bits></bit-rate></sp>     | Changes the transmission bit-rate to a user-defined bit- |
|   | rate, number of stop-bits and parity, ref.section 10.5.1 |

# Table 10-15: Allowed values for <bit-rate code> parameter for t (TRANSMISSION PARAMETERS) commands

| <br>bit-rate code> | Result                                  |  |
|--------------------|---|--|
| 0                  | Will set the bit-rate to 377400 bits/s  |  |
| 1                  | Will set the bit-rate to 460800 bits/s  |  |
| 2                  | Will set the bit-rate to 921600 bits/s  |  |
| 3                  | Will set the bit-rate to 1843200 bits/s |  |

### Table 10-16: Allowed values for <stop-bits> parameter for t (TRANSMISSION PARAMETERS) commands

| <stop-bits></stop-bits> | Result                            |  |
|-------------------------|-----------------------------------|--|
| 1                       | Will set number of stop bits to 1 |  |
| 2                       | Will set number of stop bits to 2 |  |

### Table 10-17: Allowed values for <parity> parameter for t (TRANSMISSION PARAMETERS) commands

| <parity></parity> | Result               |
|-------------------|----------------------|
| 0                 | Will set no parity   |
| 1                 | Will set odd parity  |
| 2                 | Will set even parity |

### 10.5.1 User-defined bit-rate

The STIM300 hardware is capable of setting bit-rates in the range between 1500 and 5184000 bits/s. However, the sample rate and the datagram length decide the minimum bit-rate possible, ref. Equation 11:

### Equation 11: Minimum bit-rate

 $Bit - rate_{MIN} = 1.1 \cdot bits \cdot bytes \cdot sample_rate$ 

where bits = start-bit (1) + data-bits (8) + stop-bits (1 or 2) + parity-bit (0 or 1)
bytes = number of bytes in the chosen datagram, ref. Table 6-18 and Table 6-12 (NB: number of bytes in
Table 6-12 includes <CR><LF>)
sample\_rate is the chosen sample rate [samples/s]

If a bit-rate, lower than the allowed bit-rate defined by Equation 11, is entered, the command will respond with error message E007, ref. Table 10-18.

There are a finite number of bit-rates possible to set. This is defined in Equation 12:

# Equation 12: Set bit-rate

 $Bit - rate_{SET} = \frac{82944000}{n} bits / s$ 

where n is an integer

The actually set bit-rate will hence be the closest to requested bit-rate. The response of the t (TRANSMISSION PARAMETERS)-command will be the set bit-rate. Be aware that for certain bit-rates above 1.5Mbit/s, the deviation between the requested bit-rate and set bit-rate could be larger than 1% and may be in conflict with the RS422 specification. No warnings are issued related to this issue. As a safety precaution, the new bit-rate can only be permanently set by using the s (SAVE)-command (using the new bit-rate).

### Table 10-18: Error messages for t (TRANSMISSION PARAMETERS) commands

| Error | Message                   | Possible reason   |
|-------|---------------------------|---|
| E001  | UNKOWN COMMAND            | Command is incorrectly entered                                    |
| E002  | INCORRECT NUMBER OF       | Too many or too few parameters, use of comma between command      |
|       | PARAMETERS                | and first parameter   |
| E003  | INVALID PARAMETER         | Value of parameter outside valid range                            |
| E007  | DATAGRAM WILL BE TOO LONG | Combination of bit-rate, sample rate and datagram content results |
|       | TO TRANSMIT               | in a datagram that cannot be transmitted                          |

# 10.6 r (LINE TERMINATION) command

General description: Turns the line termination ON or OFF. Line termination should be ON when communicating point-point (single master – single slave).

Note that this change will only be effective until STIM300 is initialized, reset or powered off, unless the new setting has been stored in flash using the SAVE-command (ref. section 10.11). In order to use or test a new setting in Normal Mode without permanently storing it, this can be achieved by using the EXIT n-command (ref. section 10.13).

#### Table 10-19: Available r (LINE TERMINATION) command

| Syntax                                    | Response                     |  |
|---|------------------------------|--|
| r <sp><lineterm><cr></cr></lineterm></sp> | Changes the line termination |  |

## 10.7 u (OUTPUT UNIT) command

General description: Sets the output unit of the transmission in Normal Mode.

Note that this change will only be effective until STIM300 is initialized, reset or powered off, unless the new setting has been stored in flash using the SAVE-command (ref. section 10.11). In order to use or test a new setting in Normal Mode without permanently storing it, this can be achieved by using the EXIT n-command (ref. section 10.13).

#### Table 10-22: Available u (OUTPUT UNIT) command

| Syntax   | Response  |
|--|---|
| u <sp>'<sens>','<unit><cr></cr></unit></sens></sp> | Changes the unit of the transmission in Normal Mode |

### Table 10-23: Allowed values for <sens> and <unit> for u (OUTPUT UNIT) command

| <sens></sens> | <unit></unit> | Result   |
|---------------|---------------|--|
| g             | 0             | Changes the gyro output unit to angular rate [°/s]                         |
| g             | 1             | Changes the gyro output unit to incremental angle [°/sample]               |
| g             | 2             | Changes the gyro output unit to average angular rate [°/s]                 |
| g             | 3             | Changes the gyro output unit to integrated angle [°]                       |
| g             | 8             | Changes the gyro output unit to angular rate – delayed [°/s]               |

### Figure 10-27: Example of response from u (OUTPUT UNIT) command

# STIM300 Inertia Measurement Unit

# 10.8 f (LP FILTER -3dB FREQUENCY) command

General description: Changes the low-pass filter -3dB frequency for one or all axes.

Note that low pass filter settings should be considered together with sample rate in order to avoid issues with folding due to undersampling. No warnings will be issued by STIM300 if e.g. a high filter bandwidth and a low sample rate have been chosen.

Note that change in filter setting will change the group delay, ref. Table 6-11.

Note that this change will only be effective until STIM300 is initialized, reset or powered off, unless the new setting has been stored in flash using the SAVE-command (ref. section 10.11). In order to use or test a new setting in Normal Mode without permanently storing it, this can be achieved by using the EXIT n-command (ref. section 10.13).

### Table 10-25: Available f (LP FILTER -3dB FREQUENCY) commands

| Syntax  | Response   |
|---|--|
| f <sp>&lt;-3dBfreq&gt;<cr></cr></sp>                                  | Changes the LP filter -3dB frequency for all sensors and axes          |
| f <sp>&lt;-3dBfreq&gt;','<sens><cr></cr></sens></sp>                  | Changes the LP filter -3dB frequency for all axes of a specific sensor |
| f <sp>&lt;-3dBfreq&gt;',' <sens>','<axis><cr></cr></axis></sens></sp> | Changes the LP filter -3dB frequency for a specified sensor and axis   |

### Table 10-26: Allowed values for <-3dBfreq> parameter for f (LP FILTER -3dB FREQUENCY) commands

| <-3dBfreq> | Result  |
|------------|---|
| 0          | Will change LP filter -3dB frequency to 16Hz  |
| 1          | Will change LP filter -3dB frequency to 33Hz  |
| 2          | Will change LP filter -3dB frequency to 66Hz  |
| 3          | Will change LP filter -3dB frequency to 131Hz |
| 4          | Will change LP filter -3dB frequency to 262Hz |

#### Table 10-27: Allowed values for <sens> parameter for f (LP FILTER -3dB FREQUENCY) commands

| <sens></sens> | Result  |

### 10.9 m (SAMPLE RATE) command

General description: Changes the sample rate in Normal Mode. The sample rate is the same for all channels.

Note that the sample rate could be considered invalid, even if it has been entered correctly. This is because a valid sample rate also depends on the bit rate and chosen datagram content (ref. Table 6-12 and error message E007 in Table 10-32).

Note that sample rate should be considered together with filter settings in order to avoid issues with folding due to undersampling. No warnings will be issued by STIM300 if e.g. a high filter bandwidth and a low sample rate have been chosen.

Note that this change will only be effective until STIM300 is initialized, reset or powered off, unless the new setting has been stored in flash using the SAVE-command (ref. section 10.11). In order to use or test a new setting in Normal Mode without permanently storing it, this can be achieved by using the EXIT n-command (ref. section 10.13).

DATASHEET

# STIM300 Inertia Measurement Unit

# 10.12 s (SAVE) command

General description: Saves configuration parameters to flash. This will permanently change the configuration parameters and hence be valid after an initialisation or power-off.

The flash used in STIM300 is specified to be capable of minimum 1000 saves. A save-counter has been implemented and when the number of saves exceeds 1000, there will be issued a warning. STIM300 will always attempt to save the configuration when receiving the s (SAVE) command regardless of the content of the save-counter.

### Table 10-42: Available s (SAVE) command

| Syntax      | Response  |
|-------------|---|
| s <cr></cr> | Saves system parameters to flash. This command will require an additional confirmation prior to execution. Confirmation ("Y") to be responded in upper case letter. |

#### Table 10-43: Error messages for s (SAVE) command

| Error | Message                    | Possible reason   |
|-------|----------------------------|---|
| E001  | UNKOWN COMMAND             | Command is incorrectly entered                                |

## STIM300 Inertia Measurement Unit

### 12 CONFIGURATION / ORDERING INFORMATION

The STIM300 will be delivered according to the configuration code as shown below. All configuration parameters can be changed later in Service Mode, ref. section 8.5.3. A full list of configurable parameters can be found in Table 6-11.

Configuration parameters in **bold** letters show the standard option.
